

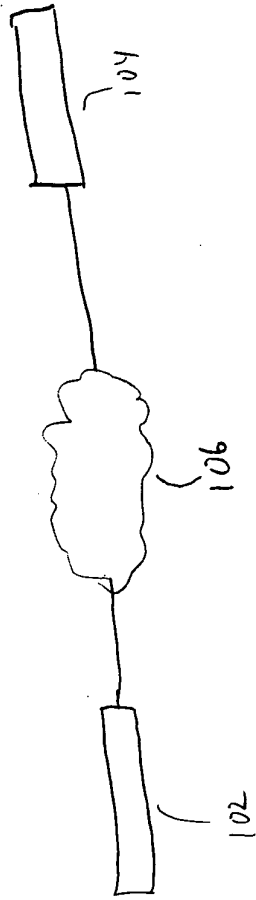

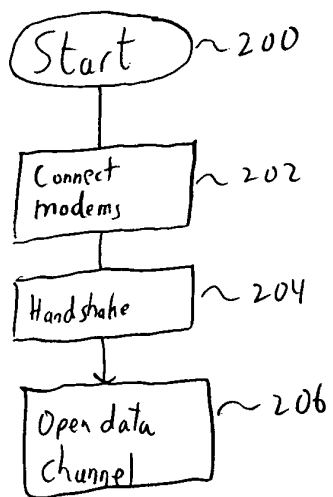

FIG. 100

FIGURE 1

[illegible]

```
graph TD; 200([Start]) --> 202[Connect modems]; 202 --> 204[Handshake]; 204 --> 206[Open data channel]; 206 --> 308[Open second logic channel]; 308 --> 310[Transmit data and diagnostic information];
```

The flowchart illustrates the process of establishing a connection between a mobile device and a base station. It begins with a 'Start' terminal (200), followed by a sequence of steps: 'Connect modems' (202), 'Handshake' (204), 'Open data channel' (206), 'Open second logic channel' (308), and finally 'Transmit data and diagnostic information' (310). Each step is represented by a rectangular box, and the process concludes at the final step.
